DC-3

Diagnostic Ultrasound System

The DC-3 is a fully-featured color Doppler system with a compact and mobile design.

The DC-3 delivers high imaging performance and versatile diagnostic solutions. Focused on the user experience, its smart ergonomic design takes user comfort to a new level. The DC-3 ultrasound system is designed to perform with speed and quality providing clinicians with high levels of confidence and enhanced ease-of-use.

Special Doppler Auto Trace

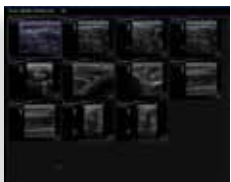

Image Review

Exceptional ergonomic solutions for user comfort

- Compact, mobile and flexible system design
- High-resolution 15-inch TFT monitor, with omni-directional arm provides optimal viewing in any position
- Swivel and height adjustable control panel
- Home base, backlit control panel with task light
- Light weight, durable transducer design
- Simple and intuitive operation

Streamlined, intelligent workflow for high productivity

- iTouch™: intelligent, one-touch image optimization
- Powerful Multi-beam Parallel Imaging
- Synchronous Navigation: on-screen instruction for manual-free operation
- Thumbnail: easy image review during live scanning
- User-programmable data tables/graphs, formulae, measurement and report.
- Multiple frequency transducers
- iStation™: provides fast and efficient storage, review, management and transfer of imaging and patient data
- Open communication platform: DICOM and multiple file formats, on board and removable media storage.

Versatile diagnostic solutions

- Comprehensive imaging modes:

2D, M, PW, CW, HPRP, Color, Power and Directional Power Doppler, Tissue Harmonic Imaging, trapezoid Imaging.

- Broad range of clinical applications:

Abdomen, Obstetrics, Gynecology, Urology, Small Parts, Peripheral Vascular, Pediatrics, Musculoskeletal, Orthopedics, Cardiology, Emergency Medicine.

- Specialty Applications:

Real-time 4D volumetric Imaging, Smart3D™ free-hand 3D imaging, iScape™ Panoramic Imaging, Endo-cavity Imaging, Needle Guide Biopsy.

Diagnose with confidence

Mindray advanced technologies enable high quality imaging for the DC-3. iBeam™ compounding, iClear™ adaptive speckle suppression imaging, tissue harmonic imaging (THI), tissue specific imaging (TSI), trapezoidal imaging and B Steer are just some of the many advanced technologies employed by the DC-3. The DC-3 delivers superior quality imaging data to enable clinicians to make confident diagnoses.

Proceed with confidence.

Mindray was founded in 1991 with a mission to deliver high quality, competitively priced medical devices and, by doing so, make healthcare more accessible and affordable around the world.

Our North America headquarters, located in Mahwah, NJ, is dedicated to providing outstanding service and support to our customers and business partners in the United States and Canada. The Mindray Research and Development team, located in Seattle, WA, enables us to design products to better meet the needs of our North American customers. Our company offers a broad range of medical solutions to clinicians including patient monitoring and life support, in-vitro diagnostics and medical imaging.

Unlike other ultrasound products that are assembled from outsourced components, 95 percent of the components in Mindray products are manufactured directly by our company. This enhances quality control, speeds time-to-market and reduces manufacturing and transportation costs. These capabilities enable Mindray to provide clinicians with practical, high-quality solutions and outstanding value. Mindray is committed to engaging in active partnerships with our customers to ultimately deliver better patient care and lower healthcare costs.
